

Hwy 7 Cenex and Service Station News

DEAN BREHMER
Service Station Manager

Spring 2025 has arrived, bringing longer days and warmer temperatures that we all enjoy. As we enter this fresh growing season, here's what you need to know about our services and products:

Fuel Prices and Market Trends

So far in 2025, gasoline and diesel prices have remained relatively stable. While we haven't seen major increases yet, we're closely monitoring how new tariffs might affect petroleum products and other goods.

Lawn and Garden Products

Good news for homeowners: prices for lawn and garden products have remained stable this season. We offer a wide range of products to help you achieve a healthy, lush green lawn:

- Various grass seed options for new or established lawns
- Several lawn fertilizer products
- Hydrothol for lake home owners (best applied in May or early June for maximum control)

LP Cylinder Refills

Despite rising costs in many areas, our LP cylinder refill and exchange prices for grilling have stayed consistent. Stop by to prepare for your outdoor cooking adventures!

Introducing Unleaded 88 (E15)

We're excited to promote Unleaded 88 (E15) this spring. Here's what you need to know:

- Contains 15% ethanol and 85% gasoline
- Suitable for vehicles 2001 or newer (always check your owner's manual)
- Benefits include lower cost, higher octane rating (88), fewer greenhouse gas emissions, and support for Minnesota's economy

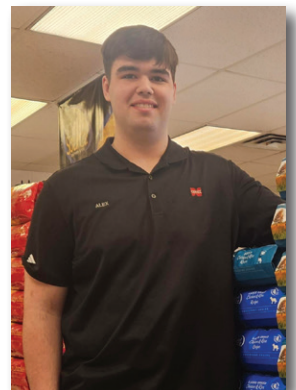

Ask our staff for a brochure if you have any questions about E15.

Hutchinson Cooperative Five-Step Fertilizer Program

Our expert team is ready to guide you through our five-step fertilizer application process. We'll help you select the right fertilizers and chemicals for your needs, whether you're planting a new lawn, maintaining an established one, or tending to gardens and trees. Don't forget to apply preemergent crabgrass control with fertilizer in late April or May!

Congratulations to Our Graduating Senior

We'd like to congratulate Hutchinson High School Senior, Alex Markworth, a valued employee at our Service Station. Alex's positive attitude and willingness to serve our customers have been greatly appreciated. He plans to attend Ridgewater College this fall for business. Best of luck in your future endeavors, Alex!

As always, our knowledgeable staff is here to help you with all your spring and summer needs. Stop by the Hutchinson Co-op Service Station today!

Adam

Spring Tire Sale

April 21st - May 2nd, 2025

Just in time for that summer driving vacation the Hutchinson Co-op Tire department will again have its annual Spring Tire Sale. Several automotive passenger and light truck tires are sale priced including private and major brand tires.

Tire Department 320-234-0420
Service Station
Hwy 7 West in Hutchinson

New Leadership at Hutchinson Co-op

SHAUN STOTTLER
General Manager

I'm thrilled to introduce myself as the new General Manager of Hutchinson Co-op. I started March 10th, 2025. With 30 years of sales and management experience across various industries, including 13 years in agriculture, I'm excited to bring my expertise to serve our members and community. My background includes roles such as 4 years of cross-selling energy and grain for CHS Prairie Lakes, 3 years serving as Energy Division Manager for Glacial Plains Coop, and 3+ years working as Agronomy Sales Manager for CHS Prairie Lakes/Herman. Most recently, I was District Manager of refined fuels for CHS, overseeing 48 co-ops, 140 Cenex stations, and managing over 220

million gallons. This diverse experience has prepared me to work closely with each department at Hutchinson Co-op, enhancing efficiency and effectiveness across our product lines to create the best possible experience for our customers.

On a personal note, my wife Tammy and I look forward to becoming part of the Hutchinson Co-op community. We have two grown sons, Zach and Ryan. Ryan and his wife Arika have a daughter, Hallie, and are expecting another girl in June. When not at work, you'll find us enjoying outdoor activities like hunting, fishing, camping, and exploring. We particularly love visiting the North Shore of Lake Superior and remote Canadian lakes. I'm eager to continue meeting staff and community members, as well as contribute to the continued success of Hutchinson Co-op. Let us build on our strengths and explore new opportunities to serve our community better.

Co-op News

TINA HUEBNER
Assistant General Manager

Propane Updates

As we wrap up this winter, we want to remind our propane customers that if you have remaining gallons on your contract, you have until April 25 to schedule your final delivery. If your tank is at 45% or less, please give us a call so we can ensure your tank is topped off. Any unused gallons will be credited to your standard account at the end of April. New contract prices and budget pricing will be available in mid-July.

To help manage your propane expenses, we offer a budget plan that allows you to make monthly payments. This way, you can avoid large bills during the holiday season and ensure a steady supply of propane throughout the year. If you have questions or would like to discuss a budget plan tailored to your needs, please don't hesitate to reach out.

Agronomy and Crop Inputs

For those needing input loans, please contact your local banker. All spring agronomy bills are due by June 10 to receive a 5% discount. Subsequent payments are due on the 10th of each month to maintain this discount. If you miss these deadlines, you will lose the discount and incur

an 18% interest rate. However, we do accept the JD Farm Plan, which offers a more favorable interest rate of 10.9%. Communication is key, so please call me before any issues arise, and I'll work with you to find a solution.

Gas Station Charging Accounts

For those with charging accounts at our gas station, remember that each account has a credit limit. Once this limit is reached, you won't be able to charge further until your account is paid in full. Our terms are net 30 days, and we allow charging for short-term convenience. Unlike major credit cards, we require payment in full each month. If you're purchasing tires and encounter credit issues, please contact me to discuss your options.

Credit Policy and Appreciation

In today's economy, budgets are tighter than ever. I want to emphasize that credit is a privilege, and I'm committed to protecting both Hutchinson Co-op's assets and your interests. Thank you for your continued business. As I always say, "To my customers, I may not have the answer, but I'll find it. I may not have the time, but I will make it." I'm grateful for the opportunity to work with you over the past 39 years. Feel free to reach out with any questions or concerns.

Tina Huebner, Assistant GM
thuebner@hutchcoop.com
320.234.0577

Thank you for choosing Hutchinson Co-op!

Corner Market: Spring and Summer Update

CASIE ZASKE
Corner Market Store
Manager

As we welcome the warmer months, Silver Lake Corner Market is excited to share some updates and celebrate our local graduates!

New Refreshing Flavors

Cool off this season with our latest additions:

- Pina Colada Frazil
- Cherry Limeade

Perfect for those sunny days ahead!

Summer Essentials at Silver Lake Cenex

- Ice: Available in 7-pound and 20-pound bags
- Non-oxygenated fuel for boats and jet skis
- Firewood for your campfires
- Snacks and s'mores supplies

Whether you're planning a day on the lake, a backyard barbecue, or a cozy campfire, we've got you covered! Stop by Silver Lake Cenex for all your summer needs!

Wide selection of Schroeder Meats products, including brats and burger patties.

Congratulations to Our Graduating Seniors

We're excited to celebrate the achievements of two talented local students as they move onto the next chapters of their lives.

Holden Anderson,
Glencoe Silver Lake High School

Holden is graduating with a high school diploma and associate's degree from Ridgewater College. He is applying to become a border patrol agent.

Indy Mason,
Dassel Cokato High School

Indy plans to complete his general studies at Ridgewater College in Hutchinson. Then receive a bachelor's degree in chemical engineering at the University of Duluth.

Spring Updates: C-Store on Adams

NICHOLE DEGN
C-Store Manager

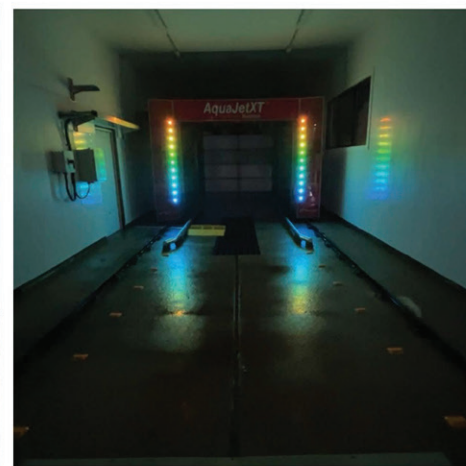

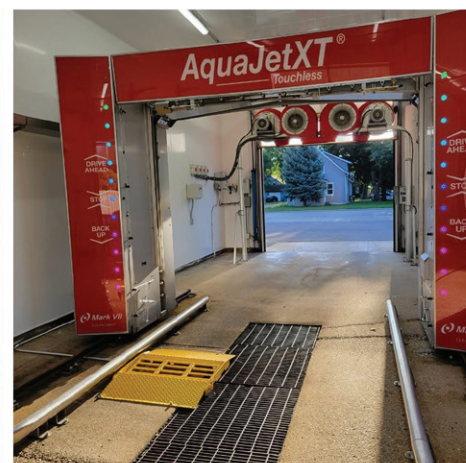

As we welcome the warmer weather, the Adams Street Cenex is excited to share some updates and promotions to kick off the spring season:

New Arrivals for Summer

We're gearing up for summer with some exciting additions:

- New Frazil Flavors: Get ready to cool off with our latest flavors.
- Energy Drink Updates: Look out for new energy drink flavors hitting our shelves soon.
- Food Trucks are back this year! Follow us on Facebook to see when they'll be here.

Car Wash Specials

- Buy 10 Get 2 Free: Stock up on carwashes and save big.
- Buy 5 Get 1 Free: Perfect for those who want to keep their vehicles clean without breaking the bank.
- Dollar Off with Gas Purchase: Combine your gas fill-up with a carwash and save even more!

And, as a bonus, we have a free vacuum for all our customers!

Congratulations to Our Graduating Seniors

We're proud to recognize two talented seniors from our community. We wish both Aaliyah and Kara the best of luck in their future endeavors!

Aaliyah Englund

After graduation, Aaliyah plans to pursue her passion as a tattoo artist.

Kara Daak

Kara will be attending cosmetology school, following her dreams in the beauty industry.

Boosting Crop Health and Yield with Follar Products

ANDY RASMUSSEN
Seed/Sales, Hutchinson

As we approach the spring planting season, it's crucial to consider strategies for maximizing nutrient uptake and plant health. The Hutchinson Co-op sales team, in partnership with Rosen's Inc., offers a range of products from in-furrow to foliar feeds designed to enhance crop health and increase yields. Here are three foliar products that have demonstrated excellent plant health benefits and yield performance:

Taurus Sulfur: Crucial for Crop Development

Sulfur, a secondary nutrient, plays a vital role in crop production and nitrogen fixation in legumes. Applying Taurus Sulfur early in the season, such as during herbicide application, provides crops with essential sulfur, helping them reach their full yield potential. Application rates include:

- 2" by 2": 1-2 quarts/acre
- Side Dress/Y Drop: 1-4 quarts/acre
- Foliar: 1-2 quarts/acre

Legend Elite: Comprehensive Nutrient Package

At 1-2 quarts per acre, Legend Elite offers an efficient way to deliver key nutrients directly to the plant, compatible with herbicide applications. It provides six essential nutrients for crop growth:

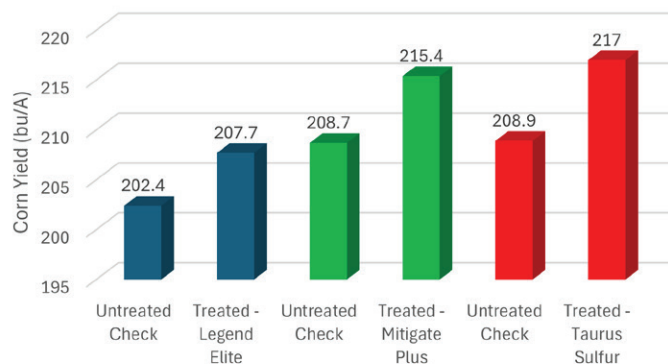

- Nitrogen (7%)
- Potassium (1%)
- Sulfur (3%)
- Manganese (2%)
- Iron (1%)
- Zinc (2%)

Legend Elite not only supplies nutrients but also helps mitigate stress, promoting overall plant health and vigor.

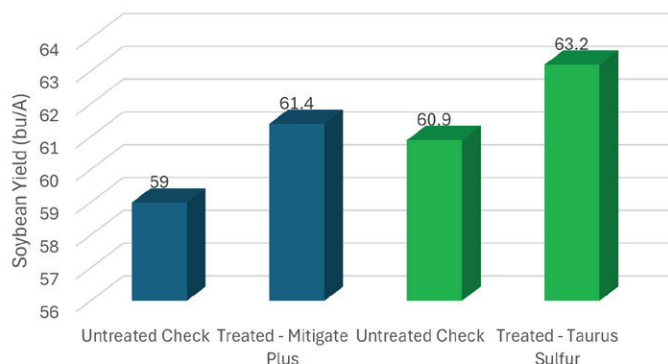

Mitigate Plus: Stress Protection and Energy Boost

Mitigate Plus is designed to protect, repair, and energize crops. Applied at 8 oz per acre, it triggers the plant's natural stress-minimizing abilities while providing efficient energy.

Corn Yields at V3

Soybean Yields at V3

Key benefits include:

- Protection before and after stress events, such as herbicide applications
- Quicker recovery from stress
- Enhanced focus on growth and yield

By incorporating these foliar products into your crop management strategy, you can significantly improve plant health, stress resistance, and ultimately, yield potential. Consult with our Hutchinson Co-op sales team to determine the best application strategy for your specific needs this growing season.

Protecting Your Nitrogen Investment: The Importance of Stabilizers

JOSH FILK
Location Lead/Sales,
Arlington

As we approach the spring planting season, it's crucial to consider how to protect our nitrogen investments. Last year's excess moisture highlighted the issue of nitrogen losses, but this should be a concern every year, regardless of weather conditions.

Understanding Nitrogen Loss

There are three primary ways nitrogen can be lost in our cropping systems:

1. Volatilization: Up to 10% of nitrogen can be lost in the first three days after application, even with incorporation.
2. Leaching: Nitrate nitrogen, which makes up about 80% of plant uptake, moves easily through the soil profile with water.
3. Denitrification: In saturated soils, 2-5% of nitrogen can be lost daily after the first three days due to bacterial activity.

Hutchinson Co-op's Solutions

At Hutchinson Co-op, we offer several products to protect your nitrogen investment:

1. BrazeN: Protects against all three major nitrogen loss

sources, ensuring more nitrogen available for the V8-V12 growth stages where 35% of the total nitrogen uptake of a corn plant is.

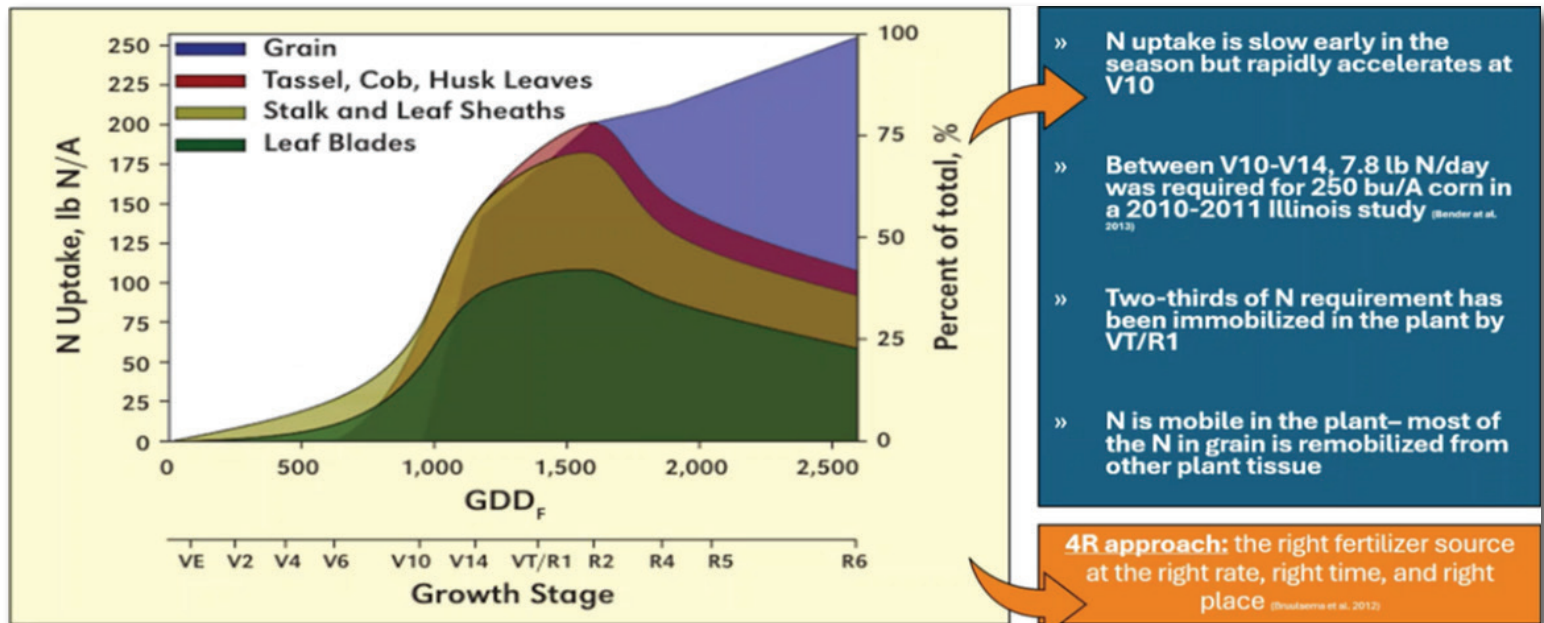

2. Factor Plus: Ideal for top-dressing urea, protecting against volatilization until rainfall incorporates the nitrogen into the root zone.
3. FuncionN: Designed for below-ground nitrogen applications (fall or spring anhydrous, or side-dressed UAN), preventing bacterial conversion of nitrogen into vulnerable forms.

Making the Right Choice

Selecting the appropriate nitrogen stabilizer can seem overwhelming, but the Hutchinson Co-op sales team is here to help. We can work with you to understand your specific needs and incorporate the right protection product into your spring plan. By using nitrogen stabilizers, you can significantly reduce losses and improve the efficiency of your fertilizer investment.

As we prepare for the upcoming planting season, consider how nitrogen stabilizers can benefit your operation. With the right strategy, we can protect your investment and set the stage for a successful growing season.

Wishing you all a safe and productive planting and growing season ahead!

Gearing Up for a Productive Growing Season

CHRIS PLAMANN
Agronomy Manager

As we welcome the spring of 2025, excitement fills the air. This is my favorite time of year, marking the culmination of winter preparations and the beginning of a new growing season. Our growers have made crucial decisions on seed, fertilizer, crop protection, and equipment maintenance. At Hutchinson Co-op, we've been equally busy ensuring we're ready to support you.

Our sales staff has worked diligently with growers to create comprehensive farm plans. On the operations side, we've overhauled our equipment to ensure peak performance. We've retired two aging machines, replacing them with more technologically advanced models to improve efficiency. Additionally, we've added a new tender truck to streamline our processes.

We're thrilled to welcome James (Jimmy) Kunkel to our team. With 25 years of application experience, Jimmy brings valuable expertise to our operations.

As we move into the growing season, let's maintain our excellent communication. We appreciate a two-day notice for all jobs - whether it's seed delivery, fertilizer application, or spraying. This advance notice helps us optimize planning and routing, minimizing wait times for everyone.

A key concern this year is tar spot in corn, which appeared late last season in many fields. Early and frequent scouting is crucial, as this disease can significantly impact yields, potentially reducing them by up to 40 bushels per acre. Our team is ready to assist with scouting and planning, and we offer an excellent lineup of fungicides to combat tar spot.

Here's to a safe and productive 2025 growing season!

Figure 1. Raised, black spots (stromata) are typical of tar spot.

Figure 2. Characteristic signs and symptoms of tar spot.

Figure 3. Tar spot stomata on ear husks.

The Best Weeds to Control Are Ones That Never Emerge

MADISON AHLBRECHT
Sales,
Lester Prairie

As spring planting season approaches, one of the biggest challenges for growers is dealing with weeds. Weeds compete with your crops for vital resources like water, sunlight, and nutrients. If left unchecked, they can significantly reduce your yield.

Why Early Weed Control Matters

Weeds can grow surprisingly fast. For example:

- Waterhemp can grow up to an inch per day in the right conditions.
- Giant ragweed can grow at twice the rate of many other annual weeds.

To effectively manage these weeds, it's essential to tackle them when they are small—ideally around 2-5 inches tall, which is about the size of a soda can. When these plants are small, they have less growing points making it easier to control them.

The Role of Preemergence Herbicides

One effective strategy is to use preemergence herbicides right after planting or impregnated into your fertilizer. These herbicides work by preventing weed seeds from germinating and emerging. Here are some key benefits:

1. Clean Start: They help create a clean field for your crops.
2. Less Competition: With fewer weeds, your crops can establish themselves better.
3. Yield Protection: Reducing weed pressure lowers the risk of yield loss.

No Pre-Application

Pre-Application

4. Extended Control: Preemergence herbicides typically provide 14-21 days of protection, especially with some rainfall to help incorporate them into the soil.

Creating a Solid Weed Control Plan

To maximize your weed control efforts:

1. Follow Up with Post-Emergence Herbicides: Aim to apply these within the protection window provided by your preemergence treatment.
2. Include Residual Herbicides: Adding a residual herbicide to your post-emergence mix can help keep weeds at bay until your crops fully canopy.
3. Plan for Overlap: Having a strategy that overlaps your residual herbicides will better protect your investment and set you up for a good foundation of weed control for this growing season and the next.

By focusing on preventing weeds from emerging and controlling them when they're small, you can protect your crops and improve your chances for a successful harvest. Remember, the best weeds to control are those that never get the chance to grow!

We're thrilled to welcome **James Kunkel** to our team as the newest custom applicator in Hutchinson. He is married to Jenny and has four kids and three grandkids. He's been around AG his whole life. James grew up on a farm north of Darwin. He's worked on the retail side and applying for 30 years.

Welcome to new hire, **Ethan Kaufmann**. He was raised here in Hutchinson and is the youngest of three siblings. Outside of work he likes to hang out with friends and family, hunting and fishing, and working with cattle. Currently he and his brother have their own small cow/calf herd. Throughout his younger years, he was active in 4-H and FFA showing beef cattle. He looks forward to expanding his knowledge and learning more about agronomy.

Propane Update

PETER WILSON
Propane Sales

As we wrap up the 2024-2025 heating season, here are some important reminders and updates for our valued propane customers:

Contract Gallons and Tank Top-Offs

If you have remaining contract gallons, make sure to top off your propane tanks by April 25th, 2025. This ensures you utilize your contracted price before the season ends.

Routine Leak Tests

This spring and summer, we'll be conducting routine leak tests as required by law. These tests are crucial for ensuring the safety and integrity of your propane system. We'll reach out to you if we have any concerns or need to schedule a test. Leak tests are required whenever there's an interruption in service, including when tanks run empty.

Delivery Options: Will Call vs. Regular Schedule Delivery (RSD)

It's important to understand the difference between our delivery options:

1. Will Call: You're responsible for monitoring your tank levels. Call when your tank reaches 25-30% capacity. Be aware of potential fees:
 - Out of Gas fee: \$75 to \$175
 - Same-day delivery fee: \$50 to \$100 during business hours, \$175 after hours
2. Regular Schedule Delivery (RSD): We share the responsibility of monitoring your tank. Benefits include:
 - No same-day delivery fees
 - Reduced out of gas fee (\$50) if your account is in good standing

- Requires a charge account or budget plan

RSD is generally a better program as it reduces the risk of running out of gas and minimizes unexpected fees.

Tank Monitoring System

Consider our tank monitoring system for more precise tracking:

- Will Call customers: \$51/year rental fee
- RSD customers: Rental fee waived
- Provides daily updates on tank levels
- Requires an email address for Will Call customers (optional for RSD)

For more information about our monitoring system or to discuss switching to RSD, please call me directly at 320-234-0418.

Remember, propane safety is our top priority. Always check your tank's expiration date, typically found on the collar or handle. If your tank is expired, we can help you with recertification or replacement options.

Stay safe and warm!

A warm welcome to new hire, **Darien Hillmann**. Darien grew up a few miles south of Buffalo Lake where his family still lives today. He attended Hutchinson High School and graduated in 2016. After high school, his passion for agriculture took him to South Dakota State University, where he obtained two bachelor's degrees in Precision Agriculture and Agricultural Systems Technology with a minor in Agronomy. While at SDSU, he met my now wife, Jenna. She graduated SDSU with a degree in Dairy Production and has been the manager of a large robotic dairy farm in Madison, SD since 2020. In May of 2021, Darien graduated from SDSU and began his career as a sales agronomist in Brookings, SD. This career allowed him to grow my knowledge of seed, crop protection products, and farm planning.

In March of 2025, Darien and Jenna made the decision to move to Hutchinson. With this move, he plans to bring a vast knowledge of agronomy to the Hutchinson Co-op and its dedicated customers. He looks forward to meeting each and every one of you over the next few months as he will be working in sales across all agronomy locations. He wishes you a safe and successful planting season!

Bulk Fuel: Navigating Turbulent Times

CHUCK TOLZTMAN
Energy Sales Specialist

The fuel markets are as unpredictable as ever. Prices that look good today might spike tomorrow, leaving many asking: Is now the right time to buy fuel? Should I fill up or contract? The answer depends on your operation and approach.

Timing Your Fuel Purchases

If you typically fill your tanks before spring planting, now is a great time to do so. If you prefer to contract some or all of your annual fuel needs, this is also a good time to lock in prices. While futures markets are currently uncertain—balancing potential tariff-driven price increases against the possibility of more oil entering the market—local prices often rise in spring and fall due to supply and demand. Acting early can help you avoid these seasonal spikes.

Benefits of Contracting Fuel

Fuel contracts take the guesswork out of fluctuating daily prices. Once you secure a contract, your price is locked in for the gallons you've committed to. This stability is especially valuable during volatile times, allowing you to plan your budget more accurately. Even contracting part of your fuel needs can benefit your operation by providing cost certainty.

Biofuel Mandates: What You Need to Know

In Minnesota, biofuel mandates impact what type of diesel we can deliver:

- Before April 1: We deliver B5 (5% biodiesel).
- After April 14: We must deliver B20 (20% biodiesel).

Higher biodiesel blends like B20 may reduce fuel economy and horsepower in some equipment. Planning your deliveries before April 1st can help maximize efficiency.

Cenex Premium Diesel: A Better Fuel Option

Cenex Roadmaster XL® and Fieldmaster® diesel fuels offer superior performance compared to typical #2 diesel. Benefits include:

- Up to 4.5% more power and 5% better fuel economy.
- 40% more effective at breaking down harmful engine deposits.
- 2.5x more effective at cleaning injectors and preventing buildup.
- 75% reduced filter blocking, extending equipment life.
- Enhanced biostability, fuel storage life, and system protection.

These premium fuels are designed to keep your equipment running efficiently in even the toughest conditions.

Let's Plan for Spring

Fuel decisions don't have to be overwhelming. Stop by Hutchinson Co-op, and we'll help you determine the best strategy for your operation—whether it's filling up now, contracting fuel, or choosing the right diesel blend for your equipment.

Have a great spring season!

SAVE THE DATE!

Market Outlook and Co-op Updates for Spring 2025

MICHAEL IRLBECK
Grain Division Manager

Corn and Soybean Market Trends

As we look ahead to the fall of 2025, we're anticipating some challenges in the grain markets. Current projections suggest weaker demand and higher carryover stocks for both corn and soybeans. These trends are likely influenced by the ongoing political landscape and tariff issues, which may lead to reduced market demand.

Contracting Strategies

Given the current market outlook, it's crucial for every producer to have a solid risk management marketing plan. While there's no perfect time to contract, consider your farm's cash flow needs when making decisions.

Hutch Co-op Storage Programs

For those with full grain bins at home, Hutchinson Co-op offers a unique free deferred pricing storage program for corn and soybeans. This program provides flexibility in managing your pricing and storage needs, allowing you to optimize your marketing strategy without the burden of additional storage costs.

Feed Truck Delivery Schedule

Our feed truck deliveries run on Mondays, Wednesdays, and Fridays. To ensure timely service, please provide 48 to 72 hours' notice for your feed orders.

As we navigate the challenges and opportunities of the 2025 growing season, Hutchinson Co-op remains committed to supporting our members with innovative programs and dedicated service. Stay tuned for more updates as we approach the planting season.

We're excited to welcome **Dylan Kucera** as our new Feed Mill Operator. Dylan, a Glencoe native and Glencoe-Silver Lake High School alumnus, will be relocating to Hutchinson with his girlfriend Mikayla and their son. Dylan is passionate about sports and community involvement, making him a great addition to the Hutch Co-op team.

TINA'S BROWNIES

- 2 cup sugar
- 1 ½ cup flour
- 1 cup oil
- 1 ½ tsp vanilla
- ½ cup cocoa
- ¼ tsp salt
- 4 eggs

Mix oil and cocoa together.

Beat eggs, add sugar and choc mixture.

Add remaining ingredients bake at 350° in 9 x 13 pan 22 minutes.

Chocolate Frosting

- 1 cup sugar
- 5 tablespoons of butter
- 1/3 cup milk
- 1 cup choc chips

Combine sugar, butter and milk bring to boil.

Stirring constantly and boil for just one minute.

Remove from heat.

Stir in choc chips until melted and smooth.
